Value Added Course on "Data Analysis and Visualization"

Academic Year :	2022-2023	Date :	16.08.2022
-----------------	-----------	--------	------------

### Introduction

This report is regarding about the value added course from Dr. L. Selvam, HoD/IT and Mr. P. Ravi, AP/IT. At first he started up with the general topic what is related to, Introduction to data visualization create customized data along with its libraries, graphs, charts, and histogram.

#### Session-I (Introduction and Learn Data analysis using Pandas)

In this session he discussed about the Introduction of Data analysis using pandas and Apply industry-relevant machine learning techniques such as Regression, Predictive Modeling, Clustering, Time Series Forecasting, Classification, etc.

#### Session-II (Hands-on training in Predictive Analytics)

In this session he discussed about predictive analytics is based on mathematical models, historical data and current data and he provided sample examples and programs for hands-on training.

#### Session-III (Explore different plots and how to apply these plots to different datasets)

In this session he discussed about data visualizations are a vital component of a data analysis, as they have the capability of summarizing large amounts of data efficiently in a graphical format.

#### Session-IV (Hands-on training in different plots in python)

In this session hands-on training to create multiple plots use matplotlib.pyplot.subplots method which returns the figure along with Axes object or array of Axes object. nrows, ncols attributes of subplots() method determine the number of rows and columns of the subplot grid.

#### Session-V (Applying data visualization on large datasets)

In this session he explained reduce memory usage by optimizing data types, Split data into chunks and Take advantage of lazy evaluation.

ENGINEERING AND TECHNOLOGY,  
K. S. R. RAJIVNAGAR,  
TIRUCHENGODE-637 215,  
NARAYANA, Dt. VAIKUNTHAPURAM.

#### Session-VI (Visualize a social network with NetworkX)

In this session he introduces very powerful tools to visualize network - Networkx and Basemap. Many interesting problems naturally arrive from or inspire some form of graph models - relationship between vertices (or nodes) and edges that connects these vertices.

#### Session-VII (Turn dash plots into interactive visualizations for major Android version releases)

In this session he discussed about Dash is a user interface library for creating analytical web applications. Those who use Python for data analysis, data exploration, visualization, modelling, instrument control, and reporting will find immediate use for Dash. Dash makes it dead-simple to build a GUI around your data analysis code.

#### Session-VIII (Hands-on training in dash plots in python)

In this session hands-on training he gave example of a Dash App that ties a Dropdown to a D3.js Plotly Graph. As the user selects a value in the Dropdown, the application code dynamically exports data from Google Finance into a Pandas Data Frame.

#### Feedback by the Students

- This value added course was really very Excellent and an interesting one.
- I was learned new technology in this value added course .
- All Session very useful for us.
